

Kirti Bhardwaj

Gocardless, London — Tech Lead & Software Engineer

March 2020 - Current

Yugabyte Migration and Scalability

- Working on scalability initiative which will enable GC to handle the increasing load
- Lead the development of E2E Load and correctness testing application (TF for testing)
- Advocated for company wide adoption of this tooling
- Worked with the team to successfully complete phase1
- Working on removing roadblocks to ensure we are able to migrate large datasets with minimal downtime while maintaining ACID guarantee..

Email Verification

- Led the project to experiment with different variations of a user's signup journey
- Built email verification for all new users signing up for GoCardless in **Rails** monolith
- Improved reporting and observability of our systems around it

Spam Labeling & other Team Projects

- Supported the project to spam label and score each new signup and feed that into our email management service in our **Rails** monolith.. Planned and explored the work around how to feed this data in different parts of our systems at GC to be able to exclude spam accounts and how to flag spam accounts as soon as they signup
- Helped or led work around different team priorities including referrals, sentries, stevelogs, regression testing, increasing test coverage to **95%** etc.
- Built scaffolding (starter app) for frontend monorepo setup making it easier to start new ui projects by running scripts using **Lerna, Typescript, Nextjs, React**. Currently in use
- Led projects to containerising apps, improve Lighthouse scores, contributed to bundle size, **build time** and other performance improvements and regular reporting of these metrics

Data and Infra pipeline optimisation

- Optimized resource usage - reduced build time for stakeholders from 60 minutes to 15 minutes & **reduced infra costs by 87%**.
- Facilitated circleci-github actions, aws to gcs and helm to utopia migration for our projects.
- Delivered data pipeline integration with **GA, Bigquery** and **Looker**.

Rebrand GC Web Experience

- Helped the team deliver new web experiences including company rebrand as TL and then as an IC.
- Did **stakeholder management**, capacity planning, scoping and delivery management as well as presenting the work to wider organization as a tech lead.
- Contributed to the tracking framework and development of Flux (GC component library).
- Worked with **Typescript, React, Nodejs**, Gatsby and Contentful for our content platform pipeline.

PAST EXPERIENCE

Walmart Labs, Bangalore — Software Engineer III

JAN 2019 - August 2019

Used **React, Redux, node**, Electrode and hapi.js to build the Fitment widget for Walmart.com **raising the ATC for auto parts by 9%**. mentored other developers. Also, worked on automating the **Registry backend** for Walmart.com including **cache implementation** and integrating with **CCM**.

Radiolocus, Mumbai and Bangalore — Developer

Twyst, Gurgaon & GetFitGo, Mumbai — Developer

Get Jugaad, India — Co-Founder
